Brooks Automation (Germany) GmbH

RFID Division

Brooks Automation Inc., headquartered in Chelmsford (MA) in the USA, operates worldwide as a provider of automation solutions. The company's RFID Division, based in Mistelgau in Germany, has for almost 17 years focused on the development, manufacture and integration of high-grade RFID hardware. Its portfolio includes readers for LF 134.2 kHz, HF 13.56 MHz, and UHF 868/915 MHz frequencies as well as gateways.

Brooks Automation offers excellent RFID systems for contactless identification, which are available in LF, HF, and UHF ranges. LF devices operate in the 134.2 kHz frequency communicating with transponders of the TIRIS™ family from Texas Instruments. All HF readers are designed to international ISO15693 standard and identify compliant RFID Transponder (Tags). The UHF devices comply with the standard ISO18000-6c/EPCGlobal Gen2.

The product ranges include RFID hardware for installation in existing infrastructure plus a variety of portable or plug-in components. Mobile solutions are notable for their easy integration, while stationary products come with numerous protocols and various functions for more sophisticated requirements.

A read/write module for the use in OEM products completes the product line.

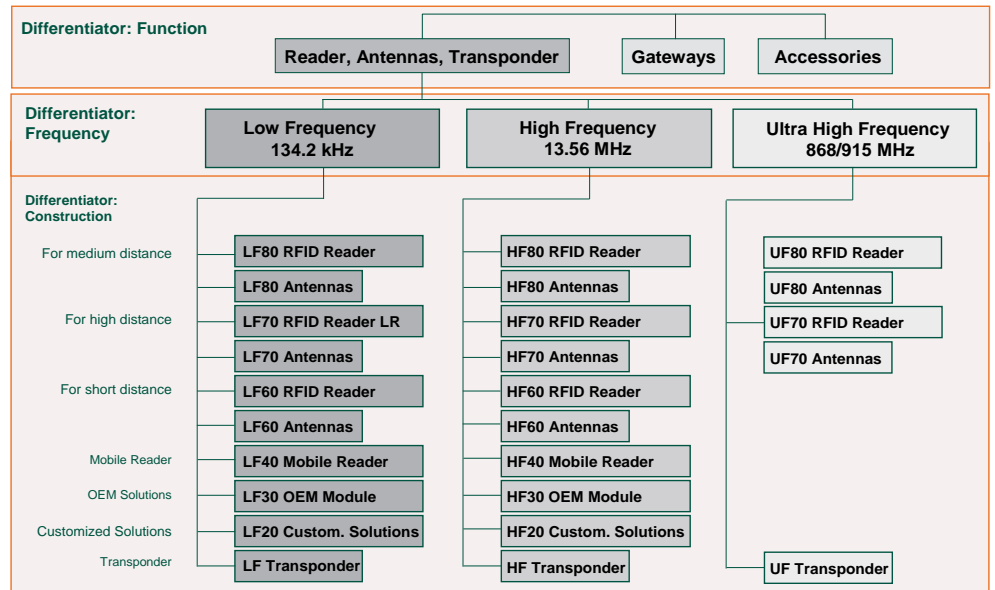

Supporting the choice of RFID devices there are a variety of antennas and accessories such as sensors, indicators, cables, and power supplies.

In addition to reliable hardware implementation, integration is also decisive for the success of an RFID project.

With worldwide applications we have accumulated extensive skills and a wealth of expertise in and around system integration for many sectors. We are your dependable RFID partner from concept to the point of handover.
