Audience

- Individuals working in the areas of:
 - Plant Operations
 - Quality
 - Yield Improvement
 - Product Development
- Users of LineWorks SPACE

LineWorks SPACE

LineWorks SPACE (**S**tatistical **P**rocess **A**nalysis & **C**ontrol **E**nvironment) as camLine's flagship, is a powerful infrastructure solution for advanced SPC that gives you complete control over production quality across all your manufacturing sites. Relied upon by a wide range of global manufacturers, it has become the de facto standard in the semiconductor industry for integrated Statistical Process Control. It interacts with multiple data sources and processes and provides many thousands of online and offline charts, simultaneously. It ensures the tracking of all your data by managing all operations with a centralized database according to the ISO 9001 standard.

LineWorks STARGATE

To maximize the value of SPC, statistics should be examined on a regular basis in order to identify quality shortfalls and take the appropriate corrective action. LineWorks STARGATE (**S**tatistical **T**rend **A**nalysis and **R**eporting **G**ATEway) provides a clear overview of performance indexes for production processes enabling you to quickly and easily assess rating and performance of your SPC activities.
