

Recurring topic - Bolted Joint Self-Loosening

Language: English
Free participation.

As a result of dynamic loads and vibration, unsecured bolted joints tend to self-loosen. In our webinar "Recurring topic – Bolted Joint Self-Loosening" we clearly explain what triggers the loosening process. Through the wedge locking principle, we will illustrate how to effectively secure bolted connections against loosening phenomena. Learn about previously common methods to secure bolts against self-loosening, which are no longer permitted by the German Institute for Standardization (DIN). You will also become familiar with the HEICO-LOCK® wedge locking system's family of products.

Mr. Luke Reed, North American Sales Manager and fastening expert from HEICO Fastening Systems, will guide you through the webinar.

Please choose between three starting times!
