Introduction to Data Vault 2.0

OVERVIEW

This 1-day introductory class explains Data Vault 2.0 and all its pillars to a general audience. It helps business analysts and managers, involved in an agile data warehouse project based on Data Vault 2.0, to understand the principles and decisions made.

This class generally helps to increase management support of Data Vault 2.0 projects by explaining concepts such as managed self-service Business Intelligence, agile delivery of functionality, and agile requirements management. The amount of content in this class is equal to the content covered on the first day of the Boot Camp.
